Q: Using System.io.iostream I am new to coding, hence, in newbie terms I can't figure out how to use the system.io library. I have a test program, and it says that "The following names are undefined: System", but that can't be because I am already using using System;. I tried #include and System.io.iostream but they didn't work. A: system.io must be some kind of an old library. Either you include the libraries that it references, which would be horrible, because they have to be included, or if those references aren't actually being used you would have to include the whole.dll file in your project. This is not something you want to do. Q: What could cause the absence of my buttons in my GUI to occur? Here is my GUI code. It is in its infancy, but for my current project, it is sufficient. It has a window with 2 buttons. The window is constructed with a JFrame that is an inner class. The code for the buttons is below: buttons.add(new JButton("Choose File")); buttons.add(new JButton("Choose Directory")); filechoose = new JFileChooser(); File selectedFile = filechoose.getSelectedFile(); if (selectedFile.getName().endsWith("txt")){ frame.getContentPane().add(buttons); } else if(selectedFile.getName().endsWith("pdf") || selectedFile.getName().endsWith("doc")){ frame.getContentPane().add(documentChooser); } else if(selectedFile.getName().endsWith("zip") || selectedFile.getName().endsWith("rar")){ frame.getContentPane().add(zipChooser); } frame.setVisible(true); Here are some screen shots of what the GUI looks like. The first is when it is maximized, and the second is when it is maximized and one of the buttons is

Share this: Usually, I don't post twice in a day on the same topic, but I do think you all deserve a double feature on Hyperhidrosis. Can you be more on topic? The first one is an article on preventative methods, explaining that the problem is caused by hyperactive sweat glands, often being genetic. Treatments are also discussed, but with a dose of scepticism. This was followed by "Confessions of a hyperhidrotic" by Sophy Cist, and the first person who described her problem as "hyperhidrosis". It's an excellent read, and well written. However, she doesn't deal with the issue of how to cope with it. It's obvious that the condition bothers her a lot, and explains that she has tried many different treatments. This leads me to the second article in today's post: "Expert Advice On Hyperhidrosis Treatment" by the same author. She continues to explain the symptoms and treatments, but this time also includes more positive aspects. She goes on to provide a list of the most important results of the treatment, and the price of the treatments. She concludes with links and some other good information. Sophy's article was interesting, and I think it's a very good starting point for people who are on the verge of breaking down and getting treatment. If you're interested in how to cope with it, a good place to start would be to look in the (possibly relatively small) article on "Hyperhidrosis treatments". Unsurprisingly, there was a response from one of the doctors mentioned in the article, Dr. Okonofu. It's hard to judge, because on the one hand, a doctor's opinion is a doctor's opinion. On the other hand, this person had a day or two to respond, and certainly made some very strong points. (As a reminder, this isn't a charity or a political forum, and I'm not sharing my opinion on the wider topic. This is purely about a certain doctor and his views on the topic.) A few points that I thought worth sharing: First: The most important thing about treating a patient is to try and find out what's causing the problem. This is usually not hard. A few years ago, I
